

COMMON INDICATION

— Your System Needs **Replacing** —

If you notice that your **Montgomery, AL** energy bills are increasing, it might indicate that your AC is working harder than it should. Here are some signs that it's time to replace your air conditioner.

01 Reduced Airflow

Poorly maintained units cause many problems that can result in less air flowing through the vents. There may be so many worn-out parts that replacing the **air conditioner** is more cost-effective than repairing it.

02 No Cool Air

A malfunctioning compressor can cause a lack of cool air and higher energy bills. The compressor is a critical component in an **air conditioning system** because it cools the refrigerant to the appropriate temperature. This issue could be an expensive repair, and you might be better off upgrading to a new model.

03 Wrong Size

If you have recently added an addition to your home, your system might be working overtime to cool it. If your unit doesn't have the capacity to cool the extra square footage, it may be time to **replace the air conditioner**.

04 Unusual Noises

Unusual sounds emanating from your **air conditioning system** are never a good sign. Something may be loose, cut, or broken, forcing your system to use more energy. If one or more significant parts are affected, it might be a good time to replace the unit.

05 Aging

Air conditioners have a limited life span. No matter how well-maintained the system is, it eventually wears out. However, it will keep trying harder and harder to cool the home. Let the best **AC contractor in Montgomery, AL** upgrade your air conditioner to a more efficient model.
